DETAILED ACTION

1. REQUIREMENT FOR UNITY OF INVENTION

As provided in 37 CFR 1.475(a), an international application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Where a group of inventions is claimed in an international application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim. See 37 CFR 1.475(e).

2. Restriction is required under 35 U.S.C. 121 and 372.
3. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1:

Groups 1-27+: Claims 1-14, 23, and 30 drawn to a MHC antigenic peptide or a combination thereof.

Groups 28-54+: Claims 15 and 31, drawn to an antibody selective for a MHC antigenic peptide.

Groups 55-81+: Claims 16-18, drawn to a nucleic acid encoding a MHC antigenic peptide, and a vector.

Groups 82-108+: Claims 25 and 28, drawn to a method of diagnosing RA.

NOTE: each MHC antigenic peptide or combination thereof, antibody selective for a MHC antigenic peptide, nucleic acid encoding a MHC antigenic peptide, or method employing a specific MHC antigenic peptide, comprises a patentably distinct invention. Accordingly, the individual invention comprise separate Groups. **This is not an election of species.**

Art Unit: 1644

4. The inventions listed do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

As set forth in the Written Opinion Form 409, filed 2/07/06, WO 93/18153 (IDS) teaches a peptide comprising SEQ ID NO:109.

Since Applicant's inventions do not contribute a special technical feature when viewed over the prior art they do not comprise a single general inventive concept and lack unity of invention.

5. Accordingly, Groups 1-108+ are not so linked as to form a single general inventive concept and restriction is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

6. The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
